

**The blockchain—fueled platform
for the gaming community**

What is eGamingFund?

eGamingFund is an online community and tokenized marketplace with a unique set of tools for game developers and content for gaming operators. Powered by proprietary blockchain technology, eGamingFund is an innovative platform, providing licensing and distribution opportunities for independent developers that are not available today.

eGamingFund utilizes its own native currency, the GFG token. This token is used for game creation, and to automate the validation, activation and expiration of purchased game licenses on the platform. The transparency and immutability of blockchain protects developers from fraudulent usage, and the community feedback loop will ensure content buyers only purchase safe and high quality content.

The GFG token will be available for purchase in small quantities directly in the eGamingFund marketplace, or through third-party exchanges. The value of the token will be based on free-market supply and demand.

How It Works

eGamingFund will largely focus on development of freemium model and social gaming, and online gambling content.

Currently, there are no platforms that offer independent game developers a one-stop-shop to develop, test, showcase and license their games to potential suppliers and gaming operators. This is why we built eGamingFund. The underlying blockchain and proprietary algorithms will automate the entire platform, creating an efficient and fraud resistant licensing environment.

An online community will grow around the GFG token that powers eGamingFund. New games will be immediately available to operators to license the content.

Opportunity

In **2018**,
freemium model gaming revenue
was over

\$110 billion,

with Chinese accounting for

62%

of the total.

Native Chinese speakers now
make up over

55%

of customers on Steam, the
pre-eminent video gaming distribution
platform.

The global cryptocurrency
market cap
sits at

\$240 billion*,

with Chinese acting as a key
market in terms of trade volume,
influence and infrastructure.

*Accurate as of May 2019

Until now, no platform has linked
these two multi-billion dollar
global markets. With the
consistently growing global
gaming market, and the recent
recovery and performance of the
cryptocurrency market, there is
no better time to launch
eGamingFund.

Blockchain Technical Specs

Algorithm: **Consensus Ledger**

Native currency: **CasinoCoin (CSC)**

Network transaction fee: **0.25 CSC (flat fee)**

Avg transaction time: **3 - 5 seconds**

Transactions per second (TPS): **Up to 1,500**

Blockchain cost, speed and scalability comparison

	eGamingFund (GFG)	Bitcoin (BTC)	Ethereum (ETH)
Transactions per second	1,500	3.87	15
Average confirmation time*	3-5 seconds	60 minutes (average six blocks for confirmation)	6.3 minutes (average 20 blocks for confirmation)
Average fee per transaction*	Less than \$0.01	\$2.42	\$0.01
Ease of scalability	Easy: Increase server capacity and connection speed to increase transaction scale and efficiency	Difficult: Core developers have failed multiple times to reach consensus for scaling strategy	Moderate: Currently testing new consensus mechanism to solve scaling issues. No indication on timing or probability of success

*Accurate as of May 2019

GFG Token Metrics

Ticker symbol: **GFG**

Total supply: **5,000,000,000 (five billion)**

Gas fee: **0.25 CSC per transaction (flat fee)***

Distribution: **GFG available on cryptocurrency exchanges**

Exchange(s): **NLexch.com, plus more to come**

Revenue Sources

Software (IDE) License Fees

- + Percentage of license/sales fee
- + eGamingFund Creator* content export fee
- + Content listing fee

Marketplace Fees

Percentage of fees from operator licensing

Revenue Share

Percentage of game usage profits

Marketplace Advertising

- + Banner ads
- + CRM/promotional space

* See appendix

Marketplace Features

+ Developers able to export their games from eGamingFund

+ Creator to the marketplace to license for revenue

+ Game licensing is automated through the marketplace
from operator through to developer accounts

+ Opportunities for developers to offer referral rewards on sales

+ Operators live monitoring of usage and any associated fees

Appendix

eGamingFund Creator

eGamingFund features a proprietary game development tool called eGamingFund Creator. This allows developers to design and build their games, user test and distribute licenses all within the same community and ecosystem.

eGamingFund Creator specialises in cloud gaming, providing end users with a frictionless direct-play experience, removing the need for download and installation. It also supports 3D and virtual simulation, and is compatible with Oculus Rift, HTC VIVE, Microsoft HoloLens and other VR and AR devices.
